

REF: INT 04/14

Item: Grease Guardian (Grease Separator)

Commodity:

The Grease Guardian (grease separator) is an automatic grease trap with inbuilt skimming mechanism, which can be installed under, sinks, ovens and dishwashers to trap and remove grease (up to 99% grease removal) at the source of the problem.

The grease guardian operates in three stages:

Stage 1:

Wastewater from the kitchen is directed through the inlet of the Grease Guardian where a removable strainer basket collects any solid debris.

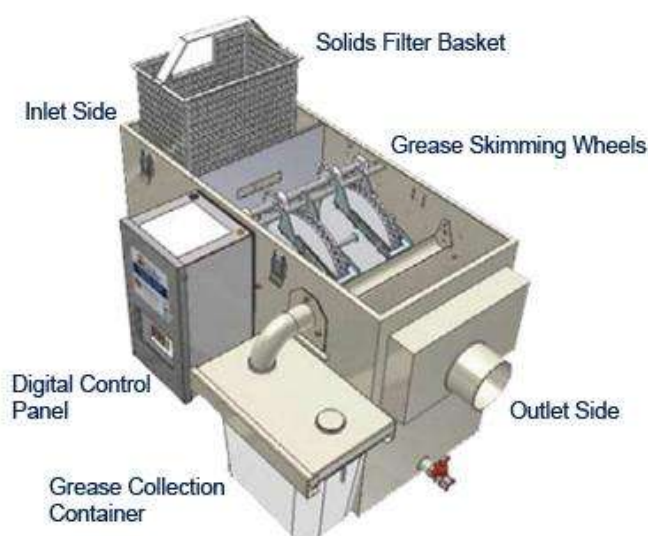

Stage 2:

Grease in the wastewater floats to the surface and is trapped while the clear water leaves the unit and enters the drainage system.

Stage 3:

The timer-driven heating element is activated to liquefy grease, which is then removed by the skimming wheels and deposited into a portable container for recycling.
