

REF: INT 05/14

Item: HCG Pregnancy Test

Commodity:

The HCG Pregnancy Test is used for the rapid, visual and qualitative determination of HCG in urine specimen to aid in the early detection of pregnancy.

The membrane is pre-coated with anti-alpha HCG capture antibody on the test line region. During testing, the urine specimen is allowed to react with the coloured conjugate (mouse anti-beta HCG **monoclonal antibody**-colloidal gold conjugate), which has been pre-dried on the test strip. The mixture then moves upward on the membrane chromatographically by capillary action.
